- Email template

## Benefits

### Room List

Hotel App presents a front desk dashboard with a full list of hotel rooms that allows for unprecedented control of your guests' arrival, departure, room move, wake-up call, mini bar consumption, DND, room clean/dirty status, etc. Hotel receptionist can quickly and easily conduct all the necessary operations in on place.

### Booking Management

A must-have feature for hotelier: Make room reservations for first time comers in the Booking List or repeated guests from Guest List. Upon successful, the system will help you send an email reminder to the guest's email address.

### Wake-up Call

Hotel staff can also schedule wake-up calls for the guests on the user-friendly interface upon guest arrival or anytime during their stay. Guests can also schedule their own wake-up calls on their room phones and cancel their own wake-up call schedule. Multiple wake-up calls can be set up for the same room.

### Manage Rooms

Set up the type of a room, VAT, and room rates. Go beyond a single room rate and configure different price for weekday, weekend, and holiday. If the hotel offers hourly stay service, just decide which types of room can be used as hourly room here.

### Mini Bar

The hotel staff's mini bar operations are simplified in S-Series Hotel App. For mini bar inventory, it can be directly added in the Web interface, and each item will be associated with a unique ID. So housekeeper or minibar attendant can report mini bar consumption via the room's phone and realize mini bar billing.

### Call Accounting

S-Series VoIP PBX will automatically track phone calls and the hotel can set up flexible call rates in Hotel App to bill guests for phone usage, reduce telecommunication costs, and increase guest satisfaction.

### Guest History

All past stays, current check-ins, and future reservations will be stored in the guest history. And you can add, delete, import, and export guests profiles. In the Guest List, hotel staff can directly make reservation and check-in an old guest.
